

Product Manager: software-based medical device for the prediction of clinical evolution for patients with central nervous system diseases

Company QYNAPSE is a medical technology company that provides a cloud-based platform for the diagnosis, prediction of clinical evolution and measurement of drug efficacy for central nervous system diseases (including Alzheimer's, Parkinson's and Multiple Sclerosis).
We combine leading edge quantitative imaging and artificial intelligence to support the targeting of clinical trials, drug development and personalized patient care.
The company is headquartered in Paris.

Job responsibilities & Mission We are looking for a Product manager to **drive the strategy and the development of a software-based medical device** for the **prognosis of central nervous system diseases and the optimization of clinical trial design**.
Directly reporting to the CEO, your missions will be the following:

- Formalizing clients' needs and identifying product opportunities in collaboration with our clinical partners,
- Translating clients' needs into technical specifications,
- Building and updating the product strategy and roadmap
- Evaluating and requesting the appropriate technical and clinical resources
- Making sure the development and the regulatory milestones remain on track with the roadmap
- Continuously gathering and prioritizing users feedbacks
- Managing intellectual property aspects
- Monitoring the competition and the technical and scientific innovations.

This position will include close interactions with the Data Science, Imaging, Development, and Clinical research teams at Qynapse, as well as our clinical partners.

Profile

- **Engineering background**, ideally in mathematics or computer science, or business and marketing background with a **deep understanding of technical topics**
- At least **3 years of experience** as Product manager or Project manager
- Efficient, focused, pragmatic & autonomous
- Very good communication skills

Skills

- **Required**
 - Experience with software engineering
 - Ability to set up and keep on track a project timeline
 - Efficiency with project management tools (e.g. Gantt chart, ...) and issue tracking systems (e.g. JIRA, Redmine, ...)
 - Excellent analytical and problem-solving skills
 - Fluent in English
- **Plus at least one of the following:**
 - Experience with medical devices and regulatory pathways
 - Experience with data science and predictive algorithms

Contract and remuneration

- Full-time position starting as soon as possible
- Remuneration depending on experience

Location 130 rue de Lourmel, 75015 Paris
